

17. Changing to a different template

You can change from one template to another by simply copying a template from the style sheets directory to the public-html/catalogue directory ensuring that the name of the directory is the same as your store name.

For example, if your store is called “acme” and you wanted to use templateAC instead of your existing template then you would:

1. Rename your existing store “acme” to “acme backup”, the location of which is in the directory:
`\iNETstore 2003\public-html\catalogue\acme`
2. Then copy the new template:
`\iNETstore 2003\stylesheets\templateAC`
to
`\iNETstore 2003\public-html\catalogue\`
3. And rename it to your store name:
`\iNETstore 2003\public-html\catalogue\templateAC`
to
`\iNETstore 2003\public-html\catalogue\acme`
